

Riverside & Moreno Valley ARES Local Activation Plan

Ver. 3.3.4

This Activation Plan provides ARES members the procedures to follow should one of the following events occurs. The objective of this plan is to provide for the rapid dissemination and collection of information to/from ARES members and their assignments in an orderly manner through the activation of a Resource Net and subsequent Tactical Nets as necessary. These procedures will be followed for both actual emergencies and practice drills and will be adapted based on the circumstances of the event. It is also understood that your first priority is the safety of you and your family.

Primary West Riverside County Activation Events:

- **Earthquakes:** As earthquakes are one of our primary concerns in SoCal, we will activate a Resource net for a magnitude 3.5 or greater in Riverside County. The smaller earthquakes with little or no damage, will serve as a training opportunity. The first available trained ARES operator will start a Resource Net as explained below to take check-ins and collect and provide information for ~1 hour after the earthquake. In the event of a major earthquake, an Emergency Coordinator or above may assume Net Control or assign a designated Operator.
- **Red Cross NTSB Response:** The Red Cross is mandated to respond to events the National Traffic Safety Board responds to. As the Riverside Red Cross is our primary served agency through a Memorandum of Understanding (MOU), we may be activated to provide communications support at the location of the incident.
- **Large Scale Fires**
- **Major flooding and other significant weather-related events**
- **Large scale Power outages**
- **Terrorist events**
- **A complete or partial communications outage occurs because of an event.**
- **Drills**

When an event occurs, the following procedures will be followed:

1. ARES members will be alerted by one or more of the following methods.
The one exception, as explained above, are earthquakes of magnitude 3.5 or greater in Riverside County. ARES operators should check in to the Resource Net as soon as possible on the Primary Frequency (or alternates should the primary be in use or down) per the Frequency Plan below in Table-1.
 - a. Alert by SMS text messages and/or email using the ARESDB.com database.
 - a. Drills will only use this method.
 - b. Alert by telephone. For actual emergencies only and assuming operational.
 - c. Resource Net on the Primary Frequency (or alternates should the primary be in use or down) per the Frequency Plan below in Table-1.
2. Alerts will be issued by the District Emergency Coordinator (DEC), Emergency Coordinator (EC), Assistant Emergency Coordinator (AEC) or a designated Net Control Operator.
3. ARES operators should check in to the Resource Net as soon as possible with their status and general location (home, work or mobile).

Ver. 3.3.4

4. Your status should be given as one of the following. Wait until requested for additional information.
 - a. **Green**: Ready and available for service assignment
 - b. **Yellow**: Not available for service but can send and receive messages for my location.
 - c. **Red**: Need Assistance.
 - d. **Black**: Not available for service, monitor only
5. The Resource Net Control Operator (RNCO) will follow-up with **Red** status operators first, then advise of current information available about the event.
6. When requested by the RNCO, operators should report any pertinent information occurring at their location. Please wait for the RNCO to request this information.
7. The RNCO or a designated operator, will provide emergency information received from ARES operators to served agencies. Operators should not contact the served agencies unless directed to do so by the RNCO or agency.
8. Should a Served Agency request operators, the RNCO will assign **Green** status operators to report to an assigned location. **DO NOT SELF-DEPLOY!**
9. Operators must check-in with the RNCO when you arrive and depart your assignment and home.
10. For large-scale events or drills, Tactical Nets will be established on separate frequencies and assigned operators will be directed to the Tactical Net. Do NOT check in to a Tactical Net until directed to do so by the RNCO.

Description	Frequency	ID / Info	Comment
Primary WRC-1	449.300- PL:103.5	KI6REC - MV Box Springs	Moreno Valley RACES Repeater 449.300 Simplex if repeater is down.
Secondary WRC-2	146.115+ PL:88.5	KB6DMZ - WRC ARES RPTR	WRC ARES Repeater Analog & Fusion Digital 146.115 Simplex if repeater is down.
Alternate WRC-3	146.655- PL:103.5	AB6MV - MVARA	MVARA Club Repeater Analog & Fusion Digital 145.655 Simplex if repeater is down.
Alternate WRC-4	TBD
